One of the USGS' principal investigators, Dr. Erin Boydston, is studying wild cats in Southern California, including bobcats and mountain lions. In some parts of Orange County where people are living in close proximity to natural bobcat habitats, they sometimes encounter "backyard bobcats." To better understand the distribution of bobcats in populated areas, Dr. Boydston has set up a website where interested "backyard bobcats." To better understand the distribution of bobcats in populated areas, Dr. Boydston has set up a website where interested people can upload pictures of their "backyard bobcats" sightings so that they can gain a greater understanding of their associations with people.

Something we never use is worthless.

It is a wonderful world, as long as we allow the world to see how wonderful we are.

Linne’s Two-toed Sloth

Music

We all love it and it is universal in all cultures. The Zoo’s Sunset at the Zoo music series is proving to be very popular with our members. Music also adds to the fun of Zoofari as the guests dance the night away, and imitate animals riding the Conservation Carousel. The Sunset at the Zoo provides a musical touch and is often debated by scholars. Even though there are many different forms or types of music as varied as the cultures themselves, several theories have been advanced as to how music developed and became so prevalent among humans. One theory is that music arose as a way to call a companion. Another theory is that it developed to mimic the natural sounds made by other creatures or human movement; that is, the natural beat of walking, running, or similar heartbeat. It has even been proposed that it is a reflection of the primitive primates that preceded spoken language.

The creation of music in the Zoo is not original to the Zoofari event. Music has been used in the past for a variety of purposes, including a backdrop for shows. However, this year the music is a little different. The idea is to provide a backdrop for a fun animal chocolate tank. The music is also a tool to attract more people to the Zoo and to have them stay longer.

The Zoo is a great vehicle to introduce people to the importance of music and its connection to nature.

That’s the Fact - Chested Screammers

The created screamer is a grey bird the size of a large goose and is native to the South American plains and marshy areas. The Screamer is a member of the true goose family. The males are black and white, and the females have a grey and white plumage.

The Screamer is one of the loudest birds in the world. The Screamer can produce a loud call that can be heard for miles. The Screamer is also known for its vocal abilities. The Screamer has a large, powerful voice and can produce a wide range of vocalizations.

Sunsets at the Zoo and Brew at the Zoo come together to deliver a fun-filled Sunday summertime activity for friends, families, and couples who enjoy listening to live music, seeing great bands, and picknicking on the lawn,” says Steve McGuigan, event organizer and Communications Chair for the Santa Ana Zoo Board of Directors. “We’re thrilled to once again welcome local artists and showcase the craftsmanship of Orange County’s finest breweries and wineries, and bring a camera for some great photo opportunities. To top all of this off, we’re once again welcoming the Elks, and bring a camera for some great photo opportunities. To top all of this off, we’re once again welcoming the Elks.

This year’s Zoofari will feature live music from the Crean Family Farm, Amazon’s Edge; and sheep bleating in the Crean Family Farm.

Zoo guests are welcome to enjoy the Brew at the Zoo, a blues concert on the front lawn of the Zoo, an art festival, and a live performance by the Elks, and bring a camera for some great photo opportunities. To top all of this off, we’re once again welcoming the Elks.
